

Engineered Wood Products

Specifications and Applications

Tom Rickerby
Tom.rickerby@wesbeam.com

Agenda – Today's Goals

Engineered Wood Products (EWP)

- Types of EWP's in the Australian Market
- Why EWP's differ to traditional sawn timber

The Importance of Correct Specification

- Responsibility of the Structural Engineer
- Where different EWP's may be specified
- CORRECT specification of Laminated Veneer Lumber (LVL)

ClearCalc Example

- Where to find timber design/products

Meet the Presenter

- **Tom Rickerby - Technical Manager at Wesbeam**

- Chartered Professional Engineer (Structural)
- Bachelor of Engineering (Civil & Construction) - Hons
- Graduate Certificate (Timber)
- Graduate Certificate (Management)

- 8 years in structural engineering consulting (residential)
- 8 years in manufacturing and design of LVL
- Director on the Board of the EWPA
- Various timber industry committees and panels

Meet the Presenter

- About  wesbeam
 - Australia's only large manufacturer of Laminated Veneer Lumber (LVL) and LVL I-joists
 - 24/7 operation north of Perth WA, producing LVL since 2004
 - 250+ staff including Structural Design and Engineering team of 25 across Australia
 - Full control of wood sourcing, to manufacturing, design, and supply

Engineered Wood Products

An overview for the Australian Market

Australia's focus on Timber

What are EWP's

LAMINATED VENEER LUMBER (LVL)

Did you know?

LVL uses the veneers peeled from the outside of the tree, which are typically denser and stronger than the inner core material.

Common sizes: Width: 35mm – 75mm Depth: 70mm – 450mm (600mm - 1200mm as special order)

GLUED LAMINATED TIMBER (GLT)

Did you know?

Glulam beams are typically manufactured with a camber (GLC) or can be requested as a straight (GLS)

Common sizes: Width: 65mm – 85mm Depth: 120mm – 625mm (larger/curved as special order)

Source: Hyne

CROSS LAMINATED TIMBER (CLT)

Did you know?

CLT buildings offer a sustainable, visually appealing alternative to traditional concrete, pre-cast panel construction. CLT buildings can be designed to resist fire for 120 minutes

Common sizes: Thickness: 60mm – 200mm

Panel sizes: 3m x 16m

Source: Think Wood

Source: Green Building Advisor

I-JOISTS

Did you know?

I-joists have a similar span range to solid LVL joists, but with significantly less weight.
I-joists can have large penetrations cut in the web to run plumbing and other services, without compromising the structural integrity

Common sizes: Depth: 200mm – 400mm

Width: 40mm x 90mm

Source: Wesbeam

PANEL PRODUCTS

Did you know?

Plywood, OSB, and particleboard can all be used for floor sheeting, wall bracing, and cladding in residential and commercial applications. In Australia, particleboard is most commonly used for floor sheeting, while OSB and plywood are typically used for bracing panels and cladding.

TABLE H3.1
CHARACTERISTIC VALUES FOR DESIGN—MGP10, MGP12, MGP15 & A17 STRESS GRADES

| Stress grade | Section size | | Characteristic values, MPa | | | | | | | | | | Design density (kg/m ³) | Joint group |
|--------------|--------------|------------|----------------------------|--------------------------------------|--|---------------------------|---|-------------------------------------|-----------------------------------|------------------------------|--------------------------------------|--|-------------------------------------|------------------|
| | Depth mm | Breadth mm | Bending (f'_b) | Tension parallel to grain (f'_t) | Compression parallel to grain (f'_c) | Shear in beams (f'_s) | Average modulus of elasticity (see Note1) parallel to grain (E) | Average modulus of rigidity (G) | Bearing | | Shear at joint details (f'_{sj}) | Tension perpendicular to grain (f'_{tp}) | | |
| | | | | | | | | | Perpendicular to grain (f'_p) | Parallel to grain (f'_t) | | | | |
| MGP 10 | 70 to 140 | 35 and 45 | 17 | 7.7 | 18 | 2.6 | 10 000 | 670 | 10 | 30 | 4.2 | 0.5 | 500 | JD5 (see Note 2) |
| | 190 | | 16 | 7.1 | 18 | 2.5 | | | | | | | | |
| | 240 | | 15 | 6.6 | 17 | 2.4 | | | | | | | | |
| | 290 | | 14 | 6.1 | 16 | 2.3 | | | | | | | | |
| MGP 12 | 70 to 140 | 35 and 45 | 28 | 12 | 24 | 3.5 | 12 700 | 850 | 10 | 30 | 4.2 | 0.5 | 540 | JD4 |
| | 190 | | 25 | 12 | 23 | 3.3 | | | | | | | | |
| | 240 | | 24 | 11 | 22 | 3.2 | | | | | | | | |
| | 290 | | 22 | 9.9 | 22 | 3.1 | | | | | | | | |
| MGP 15 | 70 to 140 | 35 and 45 | 39 | 18 | 30 | 4.3 | 15 200 | 1 010 | 10 | 30 | 4.2 | 0.5 | 570 | JD4 |
| | 190 | | 36 | 17 | 29 | 4.1 | | | | | | | | |
| | 240 | | 33 | 16 | 28 | 4.0 | | | | | | | | |
| | 290 | | 31 | 14 | 27 | 3.8 | | | | | | | | |
| A17 | 70 to 120 | 35 | 45 | 26 | 40 | 5.1 | 16 000 | 930 | 17 | 50 | 6.0 | 0.6 | 650 | JD3 |
| | | 45 | 40 | 24 | 35 | 4.5 | | | | | | | | |
| | 140, 190 | 35 | 45 | 24 | 35 | 4.5 | | | | | | | | |
| | | 45 | 40 | 21 | 32 | 4.0 | | | | | | | | |
| | 240, 290 | 35 | 40 | 18 | 27 | 3.6 | | | | | | | | |
| 45 | | 40 | 17 | 25 | 3.3 | | | | | | | | | |

NOTES:

- 1 The average modulus of elasticity includes an allowance for shear deformation and is for short duration loading.
- 2 For MGP 10 grade, JD4 may be used where heart-in material is excluded.
- 3 The modulus of rigidity (estimated as one-fifteenth of the average modulus of elasticity) is included for the estimation of torsional rigidity.
- 4 Interpolation may be used to obtain properties for depths not listed.

210 x 65 GL13C 

Standard Grades to AS 1720.1

TABLE 7.1
CHARACTERISTIC VALUES FOR STRUCTURAL DESIGN—GL-GRADES

| Stress grade | Characteristic values, MPa | | | | | |
|--------------|----------------------------|--------------------------------------|--------------------------|--|--|--|
| | Bending (f'_b) | Tension parallel to grain (f'_t) | Shear in beam (f'_s) | Compression parallel to grain (f'_c) | Short duration average modulus of elasticity parallel to the grain (E) | Short duration average modulus of rigidity for beams (G) |
| GL18 | 45 | 25 | 5.0 | 45 | 18500 | 1230 |
| GL17 | 40 | 20 | 4.2 | 33 | 16700 | 1110 |
| GL13 | 33 | 16 | 4.2 | 26 | 13300 | 900 |
| GL12 | 25 | 11 | 4.2 | 22 | 11500 | 770 |
| GL10 | 22 | 8 | 3.7 | 18 | 10000 | 670 |
| GL8 | 19 | 6 | 3.7 | 14 | 8000 | 530 |

NOTE: The characteristic values for tension for GL grades apply for tension members with the larger cross-sectional dimension not greater than 150 mm. For tension members with a cross-sectional dimension greater than 150 mm, the characteristic values are determined by multiplying the value in the table by $(150/d)^{0.167}$, where d is the larger cross-sectional dimension of the section.

300 x 63 LVL 13

UNLESS YOU DEFINE WHAT AN LVL13 IS!

Standard Grades to AS 1720.1

8.3 DESIGN PROPERTIES

8.3.1 Characteristic values for strength properties and elastic moduli

Characteristic values for structural LVL shall be obtained from the manufacturer. Characteristic values for LVL shall include consideration of the section sizes to which they are intended to apply.

Standard Grades to AS 1720.1

“LVL13” or “LVL13.2” available in the market includes:

- **Wesbeam e-beam** (flagship product for Wesbeam with an “E13.2”)
- Meyer, ITI, Tillings, Dindas, etc...
- Each manufacturer/importer have different product ranges
- Each of these products have different values for:
 - Modulus of Elasticity (“E value”)
 - bending strength
 - shear strength
 - compression/tension strength etc.
- In design, you much check all structural properties, not just the E value.

If you specify LVL13, what properties are you using to check you bending and shear strength?

Standard Grades to AS 1720.1

WESBEAM e-beam LVL
CHARACTERISTIC VALUES &
DESIGN CRITERIA

Wesbeam e-beam LVL Characteristic Values for Design

The Characteristic Values for Design (Limit State) for use with AS1720.1:2010 have been determined in accordance with the requirements set forth in AS/NZS 4063

| Characteristic Values for Design | On Edge (MPa) |
|---|---------------|
| $f_{t,k}$ Bending strength* | 50.0* |
| $f_{t,k}$ Tension strength – parallel to grain | 34.0 |
| $f_{t,k}$ Tension strength – perpendicular to grain | 0.6 |
| $f_{c,k}$ Compression strength – parallel to grain | 47.0 |
| $f_{c,k}$ Compression strength – perpendicular to grain | 16.0 |
| $f_{v,k}$ Bearing strength – perpendicular to grain | 12.0 |
| $f_{v,k}$ Bearing strength – parallel to grain | 35.0 |
| $f_{s,k}$ Shear strength | 5.0 |
| $f_{s,k}$ Shear at joints | 7.5 |
| E Short duration average modulus of elasticity | 13,200 |
| G Short duration average modulus of rigidity | 660 |

NOTE: Refer to Wesbeam for properties on flat

Volume effect multiplier

The volume effect multiplier applies to bending and tension members only and applies to the characteristic properties prior to any other calculations

$$k = \frac{(95)}{d}^{0.140}$$

Other Wesbeam e-beam LVL Properties

| Strength Group, Joint Group Classifications and Design Densities | |
|--|--------------------------|
| Average Density (kg/m ³) | 660 |
| Joint Group for nailplate tooth design | Refer nailplate supplier |
| Joint group for connector design (nails, screws and bolts) | JD3 |
| Strength Group (Seasoned) | SD6 |

These product properties apply to Wesbeam e-beam branded LVL ONLY and cannot be used for other Wesbeam LVL products.

NOTE: Characteristic Values for Design are subject to change without notice. Current values can be obtained via the Wesbeam website.

Certification and Warranty

Wesbeam Pty Ltd certifies that Wesbeam e-beam LVL is manufactured to conform to the LVL Characteristic Values for Design & the Design Criteria noted above, or if the above is modified by Wesbeam, then as advised in writing by way of update of this note, by Wesbeam. In addition, Wesbeam certifies that when Wesbeam manufactured e-beam LVL is designed and installed in accordance with the relevant Australian Standards and good building practice, Wesbeam e-beam LVL complies with the requirements of the National Construction Codes.

Wesbeam will warrant its e-beam LVL product against glue-line and/or structural failure for the service life of the application. This warranty is subject to the following conditions:

- The e-beam LVL is not stressed beyond its design capacity; and
- When preservative treated the exposure is not higher than the nominated design hazard level specified.

Date November 2023

How to specify generic LVL

1. You could specify a brand and product

e.g. 240 x 63 Wesbeam e-beam LVL

2. You could specify options

e.g. 240 x 63 LVL. Refer to table for options

| | Stiffness Properties | | Characteristic Strength Properties | | | |
|-----------------------|--|--------------------------------|------------------------------------|-------------------------------------|-----------------------------------|-------------|
| | Average Modulus of Elasticity, E (MPa) | Bending strength, f_b (MPa)* | Shear Strength, f_v (MPa) | Bearing perp. to grain, f_p (MPa) | Compression Strength, f_c (MPa) | Joint Group |
| Wesbeam e-beam | 13,200 | 50.0 | 5.0 | 12.0 | 47.0 | JD3 |
| | 13,200 | 50.0 | 5.0 | 10.0 | 43.0 | JD4 |
| | 13,200 | 48.0 | 4.5 | 10.0 | 30.0 | JD4 |
| | 13,200 | 50.0 | 4.6 | 12.0 | 38.0 | JD4 |
| | 13,200 | 44.0 | 4.1 | 6.0 | 35.0 | JD4 |

3. You could specify minimum properties

e.g. 240 x 63 LVL. Refer to table for minimum structural properties

| LVL Specification - Minimum Structural Properties | |
|---|--------|
| Average Modulus of Elasticity, E (MPa) | 13,200 |
| Bending strength, f_b (MPa)* | 48.0 |
| Shear Strength, f_v (MPa) | 4.5 |
| Bearing perp. to grain, f_p (MPa) | 10.0 |
| Compression Strength, f_c (MPa) | 30.0 |
| Joint Group | JD4 |

What are the risks if specific incorrectly?

What are the risks if specific incorrectly?

Engineering Specification – Option 1

240 x 45 LVL (refer to LVL table)

Engineering Specification – Option 2

240 x 45 E13 LVL

| LVL Specification - Minimum Structural Properties | |
|---|--------|
| Average Modulus of Elasticity, E (MPa) | 13,200 |
| Bending strength, f'_b (MPa)* | 48.0 |
| Shear Strength, f'_v (MPa) | 4.5 |
| Bearing perp. to grain, f'_p (MPa) | 10.0 |
| Compression Strength, f'_c (MPa) | 30.0 |
| Joint Group | JD4 |

What are the risks if specific incorrectly?

| LVL Specifiation - Minimum Structural Properties | |
|--|--------|
| Average Modulus of Elasticity, E (MPa) | 13,200 |
| Bending strength, f'_b (MPa)* | 48.0 |
| Shear Strength, f'_v (MPa) | 4.5 |

| Compression Strength, f'_c (MPa) | 30.0 |
| Joint Group | JD4 |

| | Calculation | Member | Quantity |
|-----|-------------|------------------------------|----------|
| 99% | B2 | 240 x 45 - e-beam (Wesbeam®) | 2500 mm |

Summary

| | | |
|-----|-----------------------------------|--|
| 99% | Moment Capacity | $M_d = 12.2 \text{ kN} \cdot \text{m}$ |
| 28% | Shear Capacity | $V_d = 34.3 \text{ kN}$ |
| | Bearing Capacity | $N_{d,gov} = 43.7 \text{ kN}$ |
| 43% | Governing Short-Term Deflection | $\delta_s = -4.31 \text{ mm}$ |
| 31% | Governing Long-Term Deflection | $\delta_l = -3.15 \text{ mm}$ |
| 0% | Governing Imposed Load Deflection | $\delta_Q = 0 \text{ mm}$ |

What are the risks if specific incorrectly?

Engineering Specification – Option 1

240 x 45 E13 LVL

| | Calculation | Member | Quantity |
|------|-------------|-------------------------------|----------|
| 107% | B2 | 240 x 45 - E13 LVL [REDACTED] | 2500 mm |

Summary

| | | |
|------|-----------------------------------|--|
| 107% | Moment Capacity | $M_d = 11.3 \text{ kN} \cdot \text{m}$ |
| 33% | Shear Capacity | $V_d = 29.8 \text{ kN}$ |
| | Bearing Capacity | $N_{d,gov} = 43.7 \text{ kN}$ |
| 43% | Governing Short-Term Deflection | $\delta_s = -4.31 \text{ mm}$ |
| 31% | Governing Long-Term Deflection | $\delta_l = -3.15 \text{ mm}$ |
| 0% | Governing Imposed Load Deflection | $\delta_Q = 0 \text{ mm}$ |

Key Reminder for Engineers

you can be **flexible**, but you can't be **vague**

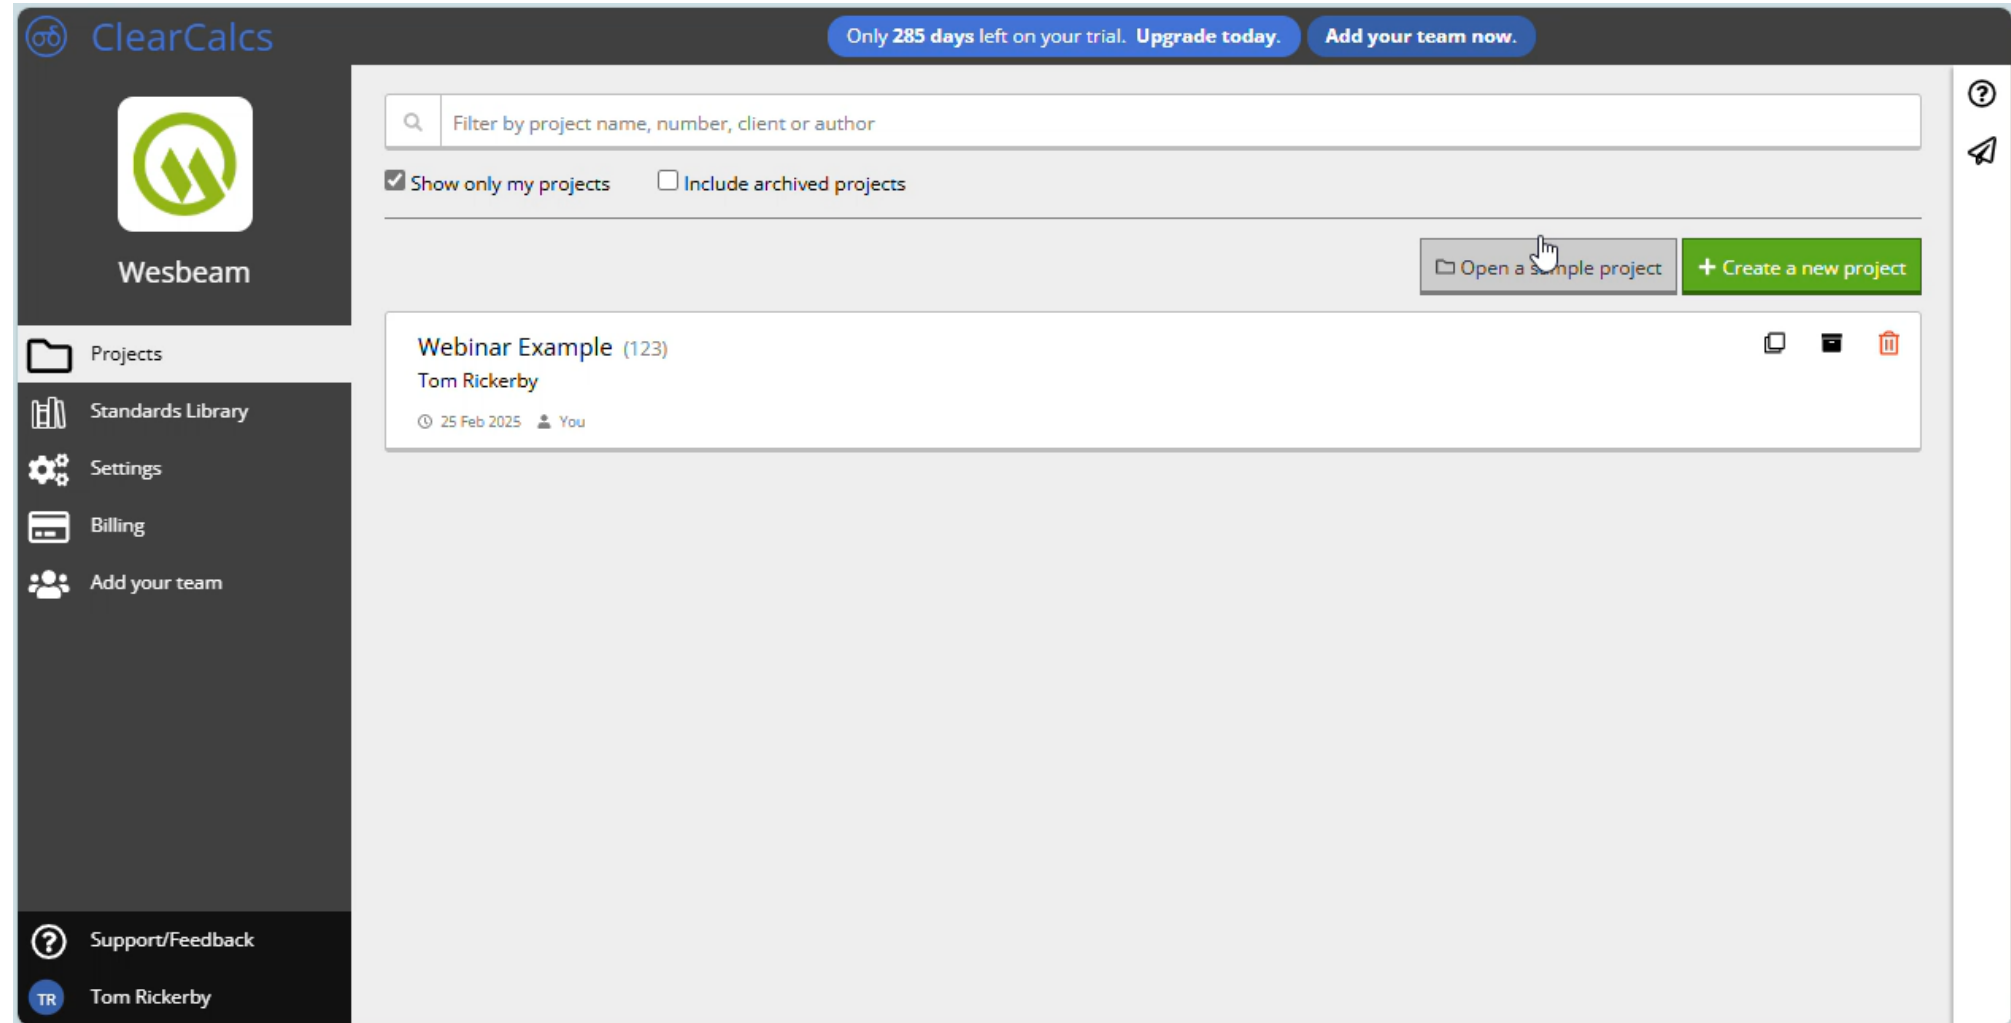

specifying **products** that are widely **available** will assist the project

if you are **unsure**, **ask!**

ClearCalcs

Timber Design

Specification in Clear Calc

Timber Design to AS 1720.3

The screenshot displays the ClearCalcs web application interface. On the left is a dark sidebar with navigation options: 'Wesbeam Back to Projects', 'webinar', 'Project Details' (selected), 'Member Schedule', 'Export...', 'Add new calculation' (highlighted in green), 'Project Defaults' (with a message: 'This project is empty. Click "Add new calculation" above to get started.'), 'Support/Feedback', and the user profile 'Tom Rickerby'. The main content area is titled 'Project Details' and contains several input fields: 'Client name', 'Project date' (set to '21 Mar 2025'), and 'Author' (set to 'Tom Rickerby'). To the right, there is a 'Unit system' dropdown menu currently set to 'Metric (MKS)'. Below the project details is a section for 'Preferred Sections' with an 'Edit...' button. A tooltip explains that these sections will appear at the top of member lists. Underneath, a list of timber options is shown under the heading 'Timber': '90 x 35 - e-beam (Wesbeam®)', '130 x 35 - e-beam (Wesbeam®)', '150 x 35 - e-beam (Wesbeam®)', '170 x 35 - e-beam (Wesbeam®)', '200 x 35 - e-beam (Wesbeam®)', and '240 x 35 - e-beam (Wesbeam®)'. A mouse cursor is hovering over the first option. On the far right, a dashed box contains a message 'Don't know what to do next?' and a green button labeled '+ Add a calculation'. The top right corner of the main area has icons for window management and a help icon.

Questions?

FAQ's for e-beam Options

TABLE 1: WESBEAM LVL - CONSTRUCTION REQUIREMENTS FOR BUSHFIRE

APPENDIX E FURTHER DESIGN METHODS FOR MEMBERS

(Normative)

E1 SCOPE

This Appendix extends the design methods given in Section 3, and covers the following topics:

- (a) The material constant (ρ) (see Paragraph E2).
- (b) Slenderness coefficients for columns (see Paragraph E3).
- (c) Spaced columns (see Paragraph E4).
- (d) Beam-column bent about both axes (see Paragraph E5).
- (e) Slenderness coefficients for beams (see Paragraph E6).
- (f) Buckling restraints (see Paragraph E7).
- (g) Concentrated loads and partial area loads on grid systems (see Paragraph E8).
- (h) Notched beams (see Paragraph E9).
- (i) Notched columns (see Paragraph E10).
- (j) Notched tension members (see Paragraph E11).
- (k) Single-tapered straight beams (see Paragraph E12).
- (l) Double-tapered, curved and pitched-cambered beams (see Paragraph E13).

Questions?

Tom.Rickerby@wesbeam.com

THANK YOU!

- We will send you a recording of the webinar by email.
- There will be a survey at the end of this webinar, we would appreciate your feedback on how we can improve.
- If you have further questions, send an email to help@clearcalcs.com or use the Help button in ClearCalcs
- Stay tuned for another webinar next month!
